

MEDICAL CRISIS RESPONSE SYSTEM

Thank you for purchasing @Risk Rescue Medical Crisis Response products.

Here is some helpful information about setting up the @Risk Rescue System and the personalised, individual Rescue Kits.

- Review the documents that are included with each Rescue Kit to ensure that they meet with your requirements.
- Place your Rescue Station in an area where it will always be highly visible.

Using a large hook, (such as a luggage hook) hang the Rescue Station on the front of a door that is always open, on a wall in an office, first-aid room or any other location that you deem practical.

- If you have purchased the @Risk Rescue System (including one or more Rescue Kits), please ensure that the individuals receiving the Rescue Kits review the page "Setting Up The Rescue Kit" that is provided with each Kit. Also confirm that they have properly completed the vital documentation that is to be placed inside their individual Kits and those that are required for your file.
- Using the Velcro-like fasteners, be sure that the Risk Rescue Kits are properly secured onto the Rescue Station so that the photographs are always visible.

Important Note: When placing the @Risk Rescue System please make sure that it can always be quickly and easily removed in case of an emergency evacuation.

If you have any questions regarding the placement of the @Risk Rescue System or about setting up the @Risk Rescue Kits please go to our web site www.atriskrescue.com or contact us on 1-866-8AT RISK (1-866-828-7475).
